Production Crimpers

Greaseless

- Slide bearings on the crimp tool improve efficiency up to 20%, reduce friction and help keep the tool free of contaminants
- No greasing improves cleanliness of machine
- Prolongs the machine's lifetime
- Maximum productivity with very low maintenance costs
- No risk of prematurely damaging the crimping head
- End product can be used in sanitary applications without cleaning
- 20% more capability for crimping stronger or more difficult couplings versus our competition's equivalent crimpers
- Consistently accurate crimp result

Universal

- For all types of hoses and fittings

Fixed 6-o'clock Die

- Stationary bottom die for efficient positioning of the product

Low Noise

- Very quiet hydraulic system

Ergonomic

- Ease of operator use for maximum productivity

Environment friendly

- Engineered to last

Since 1972

The Best Return on Investment

INCLUDED!

The best cost of ownership

With our global branches, quality UNIFLEX products and service are available almost anywhere. Customers worldwide have discovered how UNIFLEX products improve production, safety and profitability of their workplace.

Long die sets and ultra rigid tool:

higher crimp tolerances included

Slide bearing technology: **maintenance free included**

Hylo cylinder: **saves energy included**

6-o'clock die sets, thin construction and noiseless pump:

ergonomic included

Machine designed with high tolerance:

accurate crimp and longevity included

2 year warranty: **peace of mind included**

Everything you need is already included

Advanced control parameters in addition to the usual parameters are included:

- Crimping by pressure
- Pressure Force Monitoring
- Multistep crimping
- Data Logging

We are happy when the customers of our customers are satisfied!

Protect our Environment

Long-lasting equipment contributes to the reduction of CO₂

made in Germany

Due to its narrow and innovative construction, high level of user friendliness, and long service life, the HM 3 H sets new standards for quality and cost effectiveness. With its compact construction, it allows easy, uncomplicated, and “rapid” crimping. The intuitive UNIFLEX Software on the convenient Control C.2 Touch completes the HM 3 H and ensures product quality.

SC = Press tool with Cylinder

Description

A 90° elbow with long ending is no problem for the UNIFLEX HM 3 H. While our competition still searches, we have the solution.

With the new two-hole system, insertion of the dies from both sides is simplified and offers the possibility of selecting two different position (back and front) depending on the type of type of press jaw. The HM 3 H is compact and offers good accessibility.

- Package:
Machine
+ PB Ø 17, 20, 24, 28, 32, 40, 44, 50
+ QDC 239 5
+ QDS 239 B
+ Control C.2

Due to their narrow, innovative construction, high level of user friendliness, and long service life, the HM 222 and HM 225 set the standard for quality and cost effectiveness. Their unrivaled accessibility makes ergonomic working possible in production and series manufacturing. The tried and tested greaseless slide bearing technology reduces maintenance costs, and the strong crimping force of up to 1350 /1600 kN.

Description

The clear Control C.2 and the optional UTS software provide complete documentation of production data.

The compact, narrow and ergonomic construction makes working on both sides possible.

The fixed 6- o'clock die makes safe and low-force positioning of the workpiece possible.

Package HM 222:
 Machine
 + PB Ø 17, 20, 24, 28, 32, 40, 44, 50
 + QDS 239 B + QDC 239.5
 + Control C.2

Package HM 225:
 Machine
 + PB Ø 17, 20, 24, 28, 32, 40, 47, 54, 62
 + QDS 239 B + QDC 239.5
 + Control C.2

As reliable classic machines, the HM 3xx/HM 400 series unites all the outstanding properties of a production crimper. They are compact, powerful and make ergonomic working possible. Combining a convincingly solid construction with a high level of user friendliness, and long service life, the HM 3xx/HM 400 series sets a new standard for quality and cost effectiveness.

Description

Due to the long master dies, you can crimp virtually all types of fittings.

The fixed 6- o'clock die makes safe and low-force positioning of the workpiece possible.

ICC – Industrial (hose) Crimp Calculator (with C.2 and IPC controller)

Automatically calculate your crimp diameter directly from your hose and fitting measurement based on compression. Includes the official agreed, tested and approved industrial hose crimp calculator/Interface with fitting and ferrule data from Mario, PT, Campbell and Dixon.

Package HM 375 / HM 380:

- Machine
- + PB Ø 17, 20, 24, 28, 32, 40, 44, 50, 57, 71
- + 237.239.2L2
- + GDC 239.5
- + QDS 239 B
- + Control C.2

Package HM 400:

- Machine
- + PB Ø 17, 20, 24, 28, 32, 40, 44, 50, 57, 71
- + 554.239L
- + GDC 239.5
- + QDS 239 B
- + Control C.2

Due to their compact, all-round accessible construction, high level of user friendliness, and long service life, the HM 450, HM 480 and HM 495 set the standard for quality and cost effectiveness. The crimpers' particularly large opening stroke and the use of long master dies allow you to crimp all types of fittings and up to 12" industrial hoses.

Description

Due to the long master dies, you can crimp virtually all types of fittings.

The fixed 6- o'clock die makes safe and low-force positioning of the workpiece possible.

The machines are very compact and narrow for a better work environment.

ICC – Industrial (hose) Crimp Calculator (with C.2 and IPC controller)

Automatically calculate your crimp diameter directly from your hose and fitting measurement based on compression. Includes the official agreed, tested and approved industrial hose crimp calculator/Interface with fitting and ferrule data from Mario, PT, Campbell and Dixon.

Control C.2 / IPC

The CONTROL C.2 and new controller IPC with its intuitive operation for UNIFLEX crimpers, test benches and several more products has a colour touch display. The new menus (Quick-Start-Menu and Production Menu) as well as the possibility to individualize each and every menu and application will make your work much easier. Everything can be controlled via HID, i.e. via Windows devices. In addition, you can record, monitor and assure the quality of your product and how the machine works via the PFM option.

Control C.2 with screen protection option 807.2
HMI mit 7" Widescreen-Touch-Panel

interfaces:

Different users are possible:

LOGIN User Login

Factory settings via user details and password with functionality assignments and user rights.

MENU Login by menu

Quick menu and production menu.

After Login, you have the choice: Quick Menu or Production Menu.

QUICK MENU

Input of the crimping dimensions, correction value and crimping dies (automatic).

PRODUCTION MENU

Four choices for selecting compression parameters quickly and easily. Selection menu includes pressing by dimension, by pressure, stored parameters in integrated database in the controller, or by use of a barcode scanner.

PRODUCTION MENU

- (1) Crimping by dimension (parameter)
- (2) By pressure (parameter)
- (3) Via the integrated database
- (4) Barcode scanner

Easily input crimping dimensions, correction value, hold time, aperture diameter, pre-selection of counter and crimping dies (automatic).

Easily input pressure, hold time, aperture diameter, pre-selection counter and crimping dies.

Search for and create articles numerically or alpha-numerically. Articles can be easily selected using the "Quick Search Menu".

Scan article data via barcode. (accessories)

Inclusive: Pressure Force Monitoring

PFM – Standard on all machines with Control C.2

Quality-enhancing option for series production. With PFM, the upper and lower pressure limits can be set by adjusting the tolerance values obtained from test pressing.

Pressures outside these limits are output as errors. It is possible to let the machine switch off at a fixed upper or lower limit, thereby obtaining a higher process safety.

This way you can display and record combinations of incorrect hose and fittings, skipped work stage, such as skiving of the hose or a poorly positioned hose-fitting connection. Achieve integrated quality control without any additional effort.

Multistep

UDL (UNIFLEX) data logging

ICC – Industrial (hose) Crimp Calculator (with C.2 and IPC controller)

Automatically calculate your crimp diameter directly from your hose and fitting measurement based on compression. Includes the official agreed, tested and approved industrial hose crimp calculator/Interface with fitting and ferrule data from Mario, PT, Campbell and Dixon.

CONTROL IPC

START MENU

INFO - CONVERSIONS, 2 COUNTERS - SERVICE, CONTACT

WORKSHOP MODE - QUICK START

Input of crimping diameter, correction values and die set (automatic).

QDC - CALL PRESS JAW CHANGE POSITION AND SUGGESTED PRESS DIES SET

CRIMPING BY DIMENSION MODE

Input of pressing dimension, correction values, dwell time, opening diameter, preset number and dies set (automatic).

CRIMPING BY PRESSURE MODE

Input of pressure, holding time, opening diameter, preset number and dies set.

CALIPER

With the caliper, the forming results can be checked, including a freely selectable tolerance range. To do this, measure the workpiece at the point indicated by the red triangle.

LABEL

With the label printer and the UNIFLEX Label System ULS, a label can be printed automatic for each workpiece.

MULTISTEP

With interval forming, it is possible to perform a forming operation in several stages.

CMK

The machine capability index (CMK) describes the ability of the machine to meet the specified requirements. With the CMK function in the control, it is possible to set the characteristic values of the machine capability.

PFM

The PFM function enables forming to a defined pressure/diameter with monitoring of the minimum and maximum pressure/diameter. Enter the forming diameter. The forming diameter is the diameter to which the tool moves. The workpiece is permanently monitored during pressing every millisecond.

Every millisecond the monitoring system compares the crimping pressure and if there is an anomaly, it stops the crimping instantly. The functionality allows to detect repeated crimping, non adapted dies sets, non conforming crimping parts (non conforming ferrules, inserts, hoses), non conforming skiving and also non conforming insertion of the parts. All these data are recorded and can be reviewed at any time.

COMPARE CHARTS

In addition, diagrams of the data sets can be called up here directly from the pressed workpieces.

JOB-MODE

With the job mode, it is possible to bring several transformations from different data sets, which are deposited in the database, into one work order.

QUEUE MODE

QUEUE SETTING

The queue mode executes individual press data records stored in a database one after the other during production managed from the server.

IoT - INTERNET OF THINGS

IoT menu

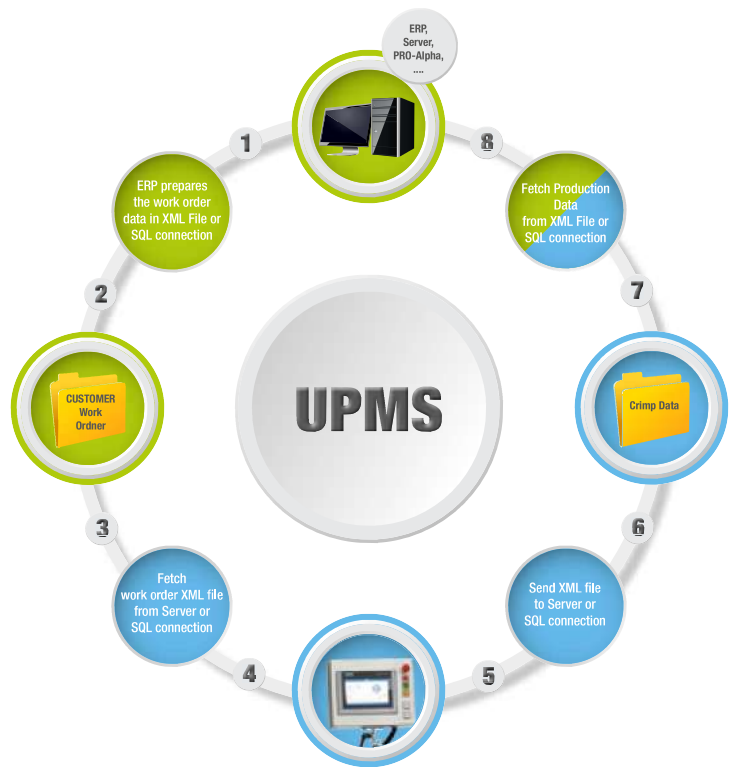

File path setting
(Part table, Job folder, Queue folder)

In the log file overview, stored press parameters are displayed.

Network settings

USB

Loading the data from the USB

RFID

The RFID reader enables automatic logon to the machine with an RFID chip.

UNIT OF MEASUREMENT SETTING

The currently set unit of measurement is displayed in green. Tapping a key sets the corresponding unit of measurement.

LANGUAGE SETTING

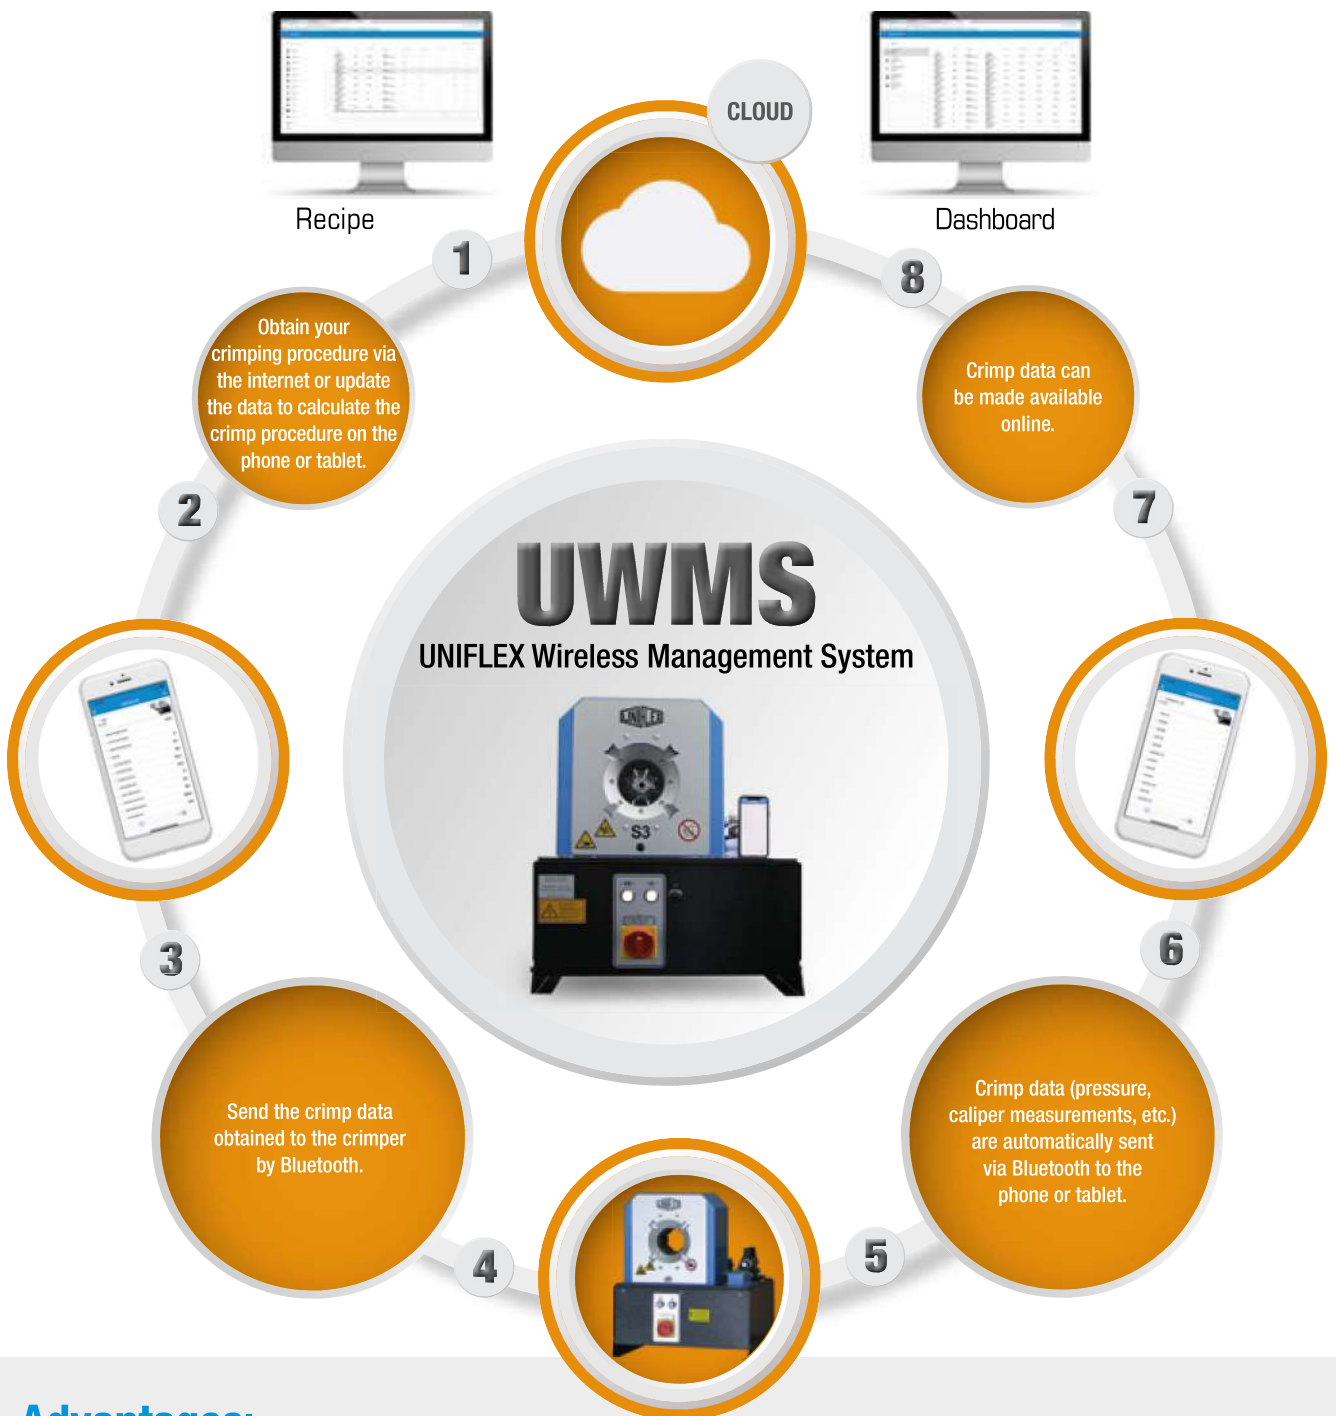

UNIFLEX Wireless Management System (UWMS)

UWMS (UNIFLEX wireless management system) allows you to put your crimping procedure on a server and keep this information up to date. Customers can access the information via an app on a phone or tablet connected to the internet and send it to the crimper by Bluetooth. All you need to do is change the dies. Crimp data and measurement information, such as the date, time, and the assembly serial number are automatically sent to your server or tablet via Bluetooth and are then available online.

UX crimp

Advantages:

- Keep customers up to date with the latest crimping specifications.
- Obtain valuable information about your crimper (No. of crimping operations, crimping specifications, crimping data)
- Use serial numbers to build traceability and reorder systems.
- Evaluate your market (what you sell, where you sell)

Accessories for Control C.2 / IPC

Order number:
Calb CtrlC C.2 (software + hardware)

Calibrating your machine is simple using digital measurement via the software and the calibration mandrel.

Order number: Kit 800.610 + 800.606/Caliper Ctrl C 3 inch
or Kit 800.610 + 800.609/Caliper Ctrl C 4 inch

Measuring point menu with foot mouse/Vernier caliper (3 or 4"): Quality testing using calipers and foot mouse (as OK button). With the digital calipers, you can also check the crimping dimensions for conicity and ovality (number of measurement points). The pictogram-driven menu control guides you through the entire process.

Order number:
TA(A)

Depth stop

PS.2 Double

Double foot pedal

807.2

Screen protection

Order number:
BCR Ctrl C.2

Barcode scanner

800.610

Foot mouse for controller interaction

RFID CTRCC

807.112

Extension cable Unimatic
B, E, C.2, length 1700 mm

Order number: 807.602

Touch panel with 1800 mm
supply cable.
(Controller can be placed on
the left side)

IPC

Display protection foil 807.867
Storage tray kit 807.872

Options

PFC Pressure Force Control

The UNIFLEX PFC (Pressure Force Control) option offers two ways to stop a compression – based on the distance travelled or the applied force, as happens with PFC. Stopping a compression stroke due to applied force can meet certain application requirements, specifically those where material behavior must be taken into account. This also makes it possible to press brittle materials, such as fibre glass. Many industry-leading glass insulator producers are already using PFC profitably.

PFC provides readings of pressing power and pressing position at any time during the pressing process. These measurements are displayed and analysed graphically. On the basis of just a few test pressings, you will learn exactly how to have the machine produce the perfect final assembly. This process can then be repeated by setting the pressing force, the rate the force increases and the precise time to switch to stop. By saving these values to the controller, you can improve productivity through shorter set up time and consistent quality can be achieved, thereby dramatically increasing customer satisfaction and profitability.

Other options:

DMS (Strain Gauges)

Option for HM 3xx crimping machines.

Force measurement directly applied to the master dies. One or more sensors are installed according to the application and precision requested. This achieves a more precise crimping force and avoids variations due to the hydraulic system or friction. Advantages include faster detection of the insertion depth of the fitting, variations in the material, and hose tolerance. The position of the fitting can also be defined to reduce conicity.

ULS.2-C

ULS.2-APP for Tablet or PC

Advantages of Hose assembly Management

Benefits of labels and what they can tell the user:

- Which components need to be replaced and when
- The date of the exchange
- The potential hazards of the machine
- The plan for preventive maintenance
- Minimizes cost of maintenance
- Avoids equipment failures and long downtimes
- Publicity for your company

UNIFLEX Labeling System – ULS Ecoline

Example of use

IoT

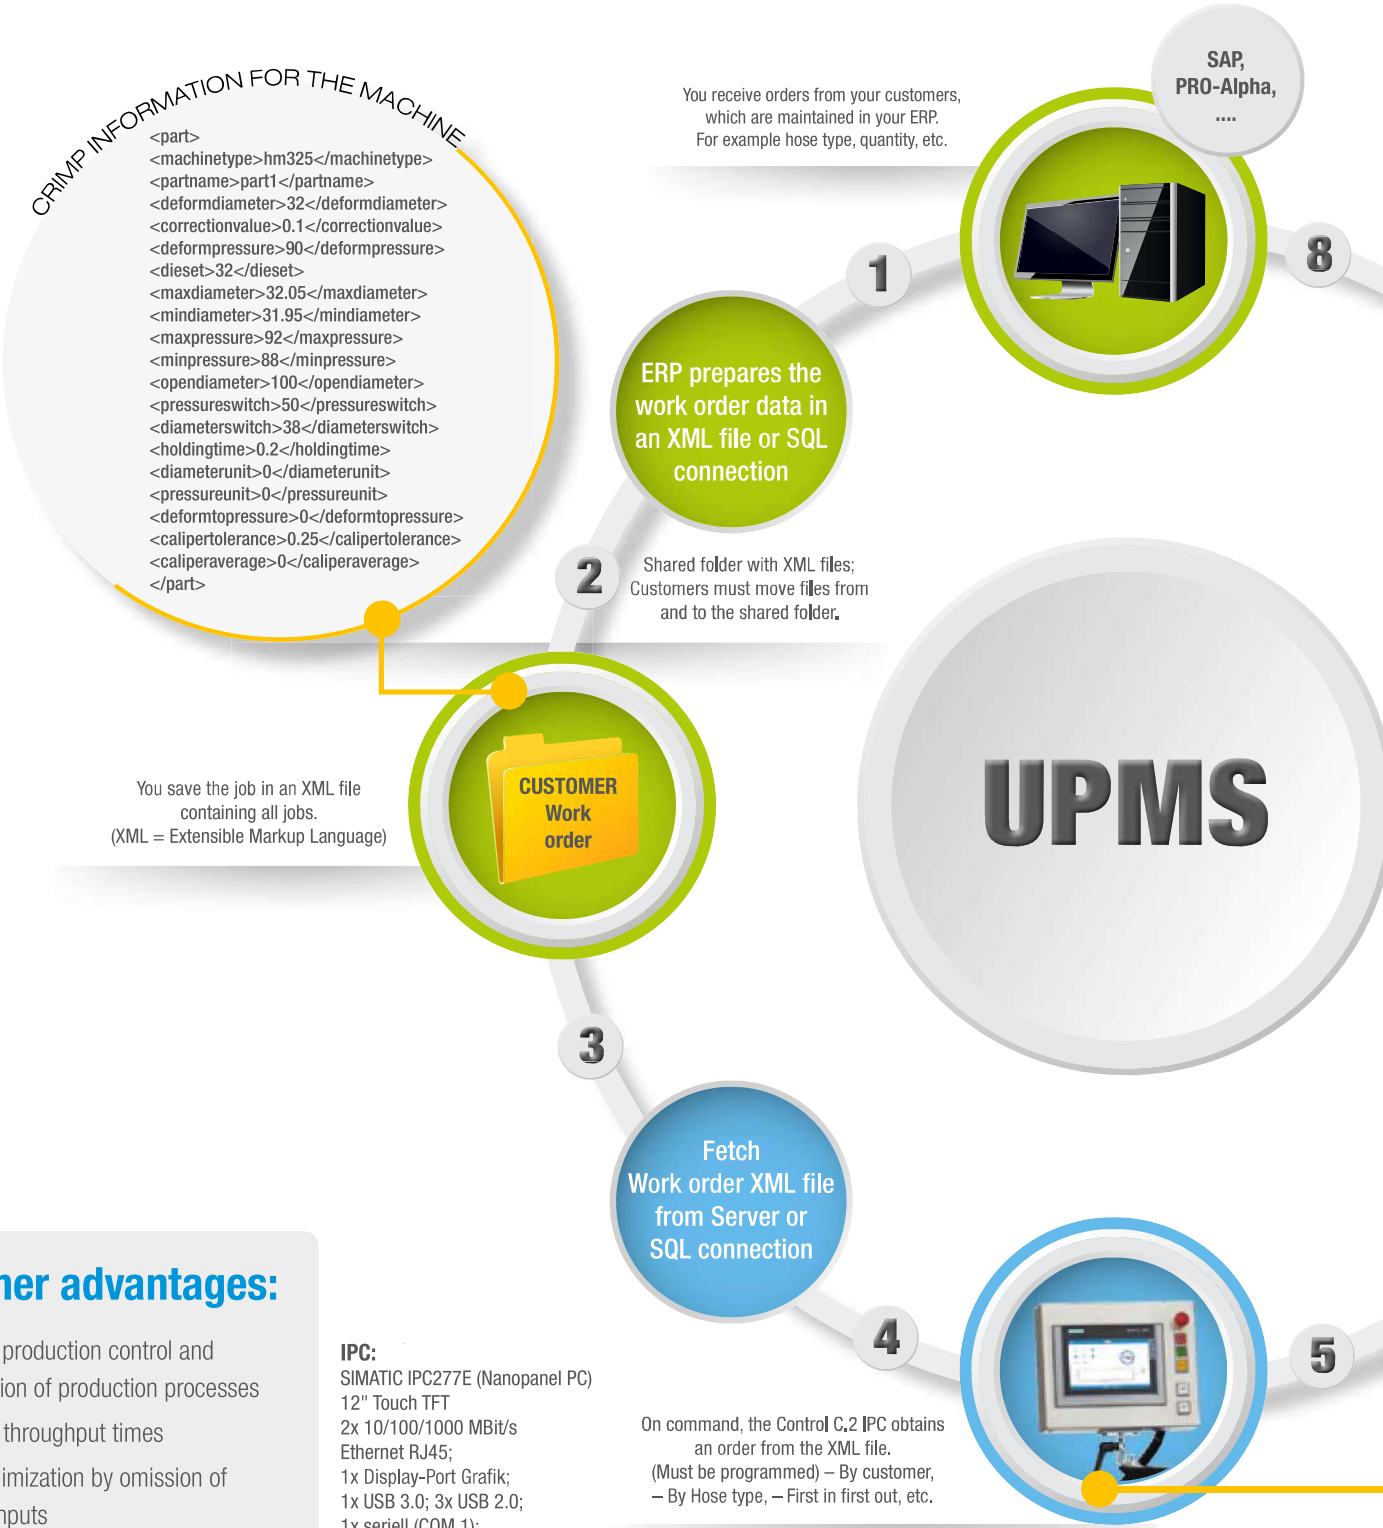

Internet of Things

UNIFLEX Paperless Management System (UPMS)

UNIFLEX has developed a complete Paperless Management for easily sending data directly from your ERP to a dashboard.

This allows you to manage all your machines by giving them working orders and retrieving production information from each machine. This gives you the flexibility to organize your production machine by machine (For example: the cutter can cut all hose sizes installed for customers, while

CRIMP INFORMATION FOR THE MACHINE

```
<part>
<machinetype>hm325</machinetype>
<partname>part1</partname>
<deformdiameter>32</deformdiameter>
<correctionvalue>0.1</correctionvalue>
<deformpressure>90</deformpressure>
<dieset>32</dieset>
<maxdiameter>32.05</maxdiameter>
<mindiameter>31.95</mindiameter>
<maxpressure>92</maxpressure>
<minpressure>88</minpressure>
<opendiameter>100</opendiameter>
<pressureswitch>50</pressureswitch>
<diameterswitch>38</diameterswitch>
<holdingtime>0.2</holdingtime>
<diameterunit>0</diameterunit>
<pressureunit>0</pressureunit>
<deformtopressure>0</deformtopressure>
<calipertolerance>0.25</calipertolerance>
<caliperaverage>0</caliperaverage>
</part>
```

You receive orders from your customers, which are maintained in your ERP. For example hose type, quantity, etc.

SAP, PRO-Alpha,

ERP prepares the work order data in an XML file or SQL connection

2 Shared folder with XML files; Customers must move files from and to the shared folder.

You save the job in an XML file containing all jobs. (XML = Extensible Markup Language)

Fetch Work order XML file from Server or SQL connection

On command, the Control C.2 IPC obtains an order from the XML file. (Must be programmed) – By customer, – By Hose type, – First in first out, etc.

Customer advantages:

- Targeted production control and optimization of production processes
- Reduced throughput times
- Error minimization by omission of manual inputs
- Traceability of production data
- Statistical evaluation of production data

IPC:
 SIMATIC IPC277E (Nanopanel PC)
 12" Touch TFT
 2x 10/100/1000 MBit/s Ethernet RJ45;
 1x Display-Port Grafik;
 1x USB 3.0; 3x USB 2.0;
 1x seriell (COM 1);
 CFAST-Slot;
 Celeron N2807 (2C/2T)
 4 GB RAM
 Windows 10

at the same time you can decide to crimp according to individual orders and test the kitting order with the test bench. The System returns all the relevant quality information you need to make sure your product is made to specifications. Stored data can be used not only for traceability but also for analyzing your productivity. This will optimize your production processes, reduce your administrative tasks and improve your quality control.

- Customer's Work Element
- UNIFLEX Work Element

Fetch Production Data from XML file or SQL connection

7

Your ERP can then import the data from the XML file and import it into your system.

6

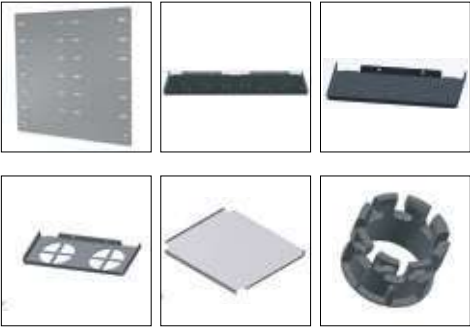

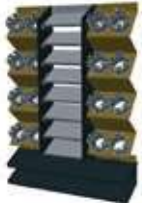

The crimper sends all crimp data to the new XML file. (Diameter, pressure, holding time, ...)
The crimper adds a record for each crimp. It contains all settings as well as the reached pressure, the achievable measure, counter, date and customized values.

Send XML file to Server or SQL connection

The machine tells the operator which dies to install and then crimping can start. (Visualization of the used parts and additional order details is possible)
